For Wi-Fi control, ESP8266 or ESP32 are excellent choices due to their integrated Wi-Fi. For Bluetooth, select HC-05 or HC-06 modules.

Step 2: Assemble the Circuit

- Connect the relay module to the microcontroller:
 - VCC of relay to 5V power supply
 - GND of relay to GND of microcontroller
 - Input pin of relay to a designated GPIO pin on the microcontroller
- Connect the light fixture to the relay:
 - Live wire to relay's COM terminal
 - NO terminal to the live wire power source
 - Neutral wire directly to the light fixture

Step 3: Program the Microcontroller

Write code to connect the microcontroller to Wi-Fi or Bluetooth. Implement control functions to turn the relay on or off based on received commands. Use IDEs like Arduino IDE for programming.

Step 4: Develop or Use a Mobile App

Create a simple app with ON/OFF buttons linked to your control protocol. Alternatively, use existing apps compatible with your microcontroller's firmware.

Step 5: Test the System
